Applications

The EmbeddedBlue Series eb500 Bluetooth Radio Module is ideal for enabling your BASIC Stamp® with a widely supported industry standard wireless protocol. Monitoring and control applications will benefit from an integrated implementation of the serial port profile for seamless connectivity with desktop computers, PDAs, and cellular phones. A focus on low current consumption makes the eb500 ideal for use in standalone battery powered devices common to robotics and remote data capture.

Description

The eb500 implements all components of the Bluetooth stack on board so that additional host processor code is not required. Once a connection to another Bluetooth device has been established, the link has the appearance of a cabled serial connection eliminating the need for special wireless protocol knowledge.

Simple UART communication facilitates the interface between the host processor and the Series eb500 radio. This UART interface may be used to discover, connect, and communicate with other Bluetooth devices. An LED indicator for connection status is provided as a standard feature.
